		00 Table of Content
		01 Date of Notification
		02 Statement in Accordance with Article 6 (3) of Regulation (EU) 2023/1114
		03 Statement in Accordance with Article 6 (6) of Regulation (EU) 2023/1114
		04 Statement in Accordance with Article 6 (5) Points (a), (b), (c) of Regulation (EU) 2023/1114
		05 Statement in Accordance with Article 6 (5), Point (d) of Regulation (EU) 2023/1114
		06 Statement in Accordance with Article 6 (5), Points (e) and (f) of Regulation (EU) 2023/1114
		SUMMARY
		07 Warning in Accordance with Article 6 (7), Second Subparagraph of Regulation (EU) 2023/1114
		08 Characteristics of the Crypto-Asset
		09 Information about the Quality and Quantity of Goods or Services to which the Utility Tokens Give Access and Restrictions on the Transferability.
		10 Key Information about the Admission to Trading
		PART I – INFORMATION ON RISKS
		I.01 Admission to Trading-Related Risks
		I.02 Issuer-Related Risks
		I.03 Crypto-Assets-Related Risks
		I.04 Project Implementation-Related Risks
		I.05 Technology-Related Risks

		I.06	Mitigation Measures
		PART A – INFORMATION ABOUT THE OFFEROR OR THE PERSON SEEKING ADMISSION TO TRADING	
		A.01	Name
		A.02	Legal Form
		A.03	Registered Address
		A.04	Head Office
		A.05	Registration Date
		A.06	Legal Entity Identifier
		A.07	Another Identifier Required Pursuant to Applicable National Law
		A.08	Contact Telephone Number
		A.09	E-mail Address
		A.10	Response Time (Days)
		A.11	Parent Company
		A.12	Members of the Management body
		A.13	Business Activity
		A.14	Parent Company Business Activity
		A.15	Newly Established
		A.16	Financial Condition for the Past Three Years
		A.17	Financial Condition since Registration
		PART B - INFORMATION ABOUT THE ISSUER IF DIFFERENT FROM THE OFFEROR OR PERSON SEEKING ADMISSION TO TRADING	
		B.01	Issuer Different from Offeror or Person Seeking Admission to Trading
		B.02	Name
		B.03	Legal Form
		B.04	Registered Address
		B.05	Head Office
		B.06	Registration Date
		B.07	Legal Entity Identifier
		B.08	Another Identifier Required Pursuant to Applicable National Law

		B.09	Parent Company
		B.10	Members of the Management Body
		B.11	Business Activity
		B.12	Parent Company Business Activity
		PART C – INFORMATION ABOUT THE OPERATOR OF THE TRADING PLATFORM IN CASES WHERE IT DRAWS UP THE CRYPTO-ASSET WHITE PAPER AND INFORMATION ABOUT OTHER PERSONS DRAWING THE CRYPTO-ASSET WHITE PAPER PURSUANT TO ARTICLE 6(1), SECOND SUBPARAGRAPH, OF REGULATION (EU) 2023/1114	
		C.01	Name
		C.02	Legal Form
		C.03	Registered Address
		C.04	Head Office
		C.05	Registration Date
		C.06	Legal Entity Identifier of the Operator of the Trading Platform
		C.07	Another Identifier Required Pursuant to Applicable National Law
		C.08	Parent Company
		C.09	Reason for Crypto-Asset White Paper Preparation
		C.10	Members of the Management Body
		C.11	Operator Business Activity
		C.12	Parent Company Business Activity
		C.13	Other Persons Drawing up the Crypto Asset White Paper According to Article 6 (1), Second Subparagraph, of Regulation (EU) 2023/1114
		C.14	Reason for Drawing the White Paper by Persons Referred to in Article 6 (1), Second Subparagraph, of Regulation (EU) 2023/1114
		PART D – INFORMATION ABOUT THE CRYPTO-ASSET PROJECT	
		D.01	Crypto-Asset Project Name
		D.02	Crypto-Assets Name
		D.03	Abbreviation
		D.04	Crypto-Asset Project Description
		D.05	Details of all Natural or Legal Persons Involved in the Implementation of the Crypto-Asset Project

		D.06	Utility Token Classification
		D.07	Key Features of Goods/Services for Utility Token Projects
		D.08	Plans for the Token
		D.09	Resource Allocation
		D.10	Planned Use of Collected Funds or Crypto-Assets
		PART E – INFORMATION ABOUT THE OFFER TO THE PUBLIC OF CRYPTO-ASSETS OR THEIR ADMISSION TO TRADING	
		E.01	Admission to Trading
		E.02	Reasons for the Admission to Trading
		E.03	Fundraising Target
		E.04	Minimum Subscription Goals
		E.05	Maximum Subscription Goal
		E.06	Oversubscription Acceptance
		E.07	Oversubscription Allocation
		E.08	Issue Price
		E.09	Official Currency or any other Crypto-Assets Determining the Issue Price
		E.10	Subscription Fee
		E.11	Offer Price Determination Method
		E.12	Total Number of Traded Crypto-Asset
		E.13	Targeted Holders
		E.14	Holder Restrictions
		E.15	Reimbursement Notice
		E.16	Refund Mechanism
		E.17	Refund Timeline
		E.18	Offer Phases
		E.19	Early Purchase Discount
		E.20	Time-Limited Offer
		E.21	Subscription Period Beginning

		E.22	Subscription Period End
		E.23	Safeguarding Arrangements for Offered Funds/Crypto-Assets
		E.24	Payment Methods for Crypto-Asset Purchase
		E.25	Value Transfer Methods for Reimbursement
		E.26	Right of Withdrawal
		E.27	Transfer of Purchased Crypto-Assets
		E.28	Transfer Time Schedule
		E.29	Purchaser's Technical Requirements
		E.30	Crypto-Asset Service Provider (CASP) Name
		E.31	CASP Identifier
		E.32	Placement Form
		E.33	Trading Platforms Name
		E.34	Trading Platforms Market Identifier Code (MIC)
		E.35	Trading Platforms Access
		E.36	Involved Costs
		E.37	Offer Expenses
		E.38	Conflicts of Interest
		E.39	Applicable Law
		E.40	Competent Court
		PART F – INFORMATION ABOUT THE CRYPTO-ASSET	
		F.01	Crypto-Asset Type
		F.02	Crypto-Asset Functionality
		F.03	Planned Application of Functionalities
		F.04	Type of White Paper
		F.05	The type of Submission
		F.06	Crypto-Asset Characteristics
		F.07	Commercial Name or Trading Name
		F.08	Website of the Issuer

		F.09	Starting date of Offer to the Public or Admission to Trading
		F.10	Publication Date
		F.11	Any other Services Provided by the Issuer
		F.12	Identifier of Operator of the Trading Platform
		F.13	Language or Languages of the White Paper
		F.14	Digital Token Identifier Code used to Uniquely Identify the Crypto-Asset or Each of the Several Crypto Assets to which the White Paper Relates, Where Available
		F.15	Functionally Fungible Group Digital Token Identifier, where available
		F.16	Voluntary Data Flag
		F.17	Personal data Flag
		F.18	LEI Eligibility
		F.19	Home Member State
		F.20	Host Member States
		PART G – INFORMATION ON RIGHTS AND OBLIGATIONS ATTACHED TO THE CRYPTO-ASSETS	
		G.01	Purchaser Rights and Obligations
		G.02	Exercise of Rights and Obligations
		G.03	Conditions for Modifications of Rights and Obligations
		G.04	Future Public Offers
		G.05	Issuer Retained Crypto-Assets
		G.06	Utility Token Classification
		G.07	Key Features of Goods/Services of Utility Tokens
		G.08	Utility Tokens Redemption
		G.09	Non-Trading Request
		G.10	Crypto-Assets Purchase or Sale Modalities
		G.11	Crypto-Assets Transfer Restrictions
		G.12	Supply Adjustment Protocols
		G.13	Supply Adjustment Mechanisms

		G.14	Token Value Protection Schemes
		G.15	Token Value Protection Schemes Description
		G.16	Compensation Schemes
		G.18	Applicable Law
		G.19	Competent Court
		PART H – INFORMATION ON THE UNDERLYING TECHNOLOGY	
		H.01	Distributed Ledger Technology
		H.02	Protocols and Technical Standards
		H.03	Technology Used
		H.04	Consensus Mechanism
		H.05	Incentive Mechanisms and Applicable Fees
		H.06	Use of Distributed Ledger Technology
		H.07	DLT Functionality Description
		H.08	Audit
		H.09	Audit Outcome
		PART J – INFORMATION ON THE SUSTAINABILITY INDICATORS IN RELATION TO ADVERSE IMPACT ON THE CLIMATE AND OTHER ENVIRONMENT-RELATED ADVERSE IMPACTS	
		J-01	Adverse Impacts on Climate and Other Environment-Related Adverse Impacts
		S.02	Name
		S.03	Relevant Legal Entity Identifier
		S.04	Name of the Crypto-Asset
		S.05	Consensus Mechanism
		S.06	Incentive Mechanisms and Applicable Fees
		S.07	Beginning of the Period to which the Disclosure Relates
		S.08	End of the Period to which the Disclosure Relates
		S.09	Energy Consumption
		S.10	Energy Consumption Sources and Methodologies

01	Date of Notification	This white paper was notified to the Dutch Authority for the Financial Markets (AFM) on August 29, 2025.
02	Statement in Accordance with Article 6(3) of Regulation (EU) 2023/1114	‘This crypto-asset white paper has not been approved by any competent authority in any Member State of the European Union. The person seeking admission to trading of the crypto-asset is solely responsible for the content of this crypto-asset white paper.’
03	Compliance Statement in Accordance with Article 6(6) of Regulation (EU) 2023/1114	‘This crypto-asset white paper complies with Title II of Regulation (EU) 2023/1114 and, to the best of the knowledge of the management body, the information presented in the crypto-asset white paper is fair, clear and not misleading and the crypto- asset white paper makes no omission likely to affect its import.’
04	Statement in Accordance with Article 6(5), Points (a), (b), (c) of Regulation (EU) 2023/1114	‘The crypto-asset referred to in this white paper may lose its value in part or in full, may not always be transferable and may not be liquid.’
05	Statement in Accordance with Article 6(5), Point (d) of Regulation (EU) 2023/1114	‘False’ – Not applicable.
06	Statement in Accordance with Article 6(5), Points (e) and (f) of Regulation (EU) 2023/1114	‘The crypto-asset referred to in this white paper is not covered by the investor compensation schemes under Directive 97/9/EC of the European Parliament and of the Council. The crypto-asset referred to in this white paper is not covered by the deposit guarantee schemes under Directive 2014/49/EU of the European Parliament and of the Council.’

SUMMARY		
07	Warning in accordance with Article 6(7), Second Subparagraph of Regulation (EU) 2023/1114	'WARNING This summary should be read as an introduction to the crypto-asset white paper. The prospective holder should base any decision to purchase this crypto – asset on the content of the crypto- asset white paper as a whole and not on the summary alone. The admission to trading of this crypto- asset does not constitute an offer or solicitation to purchase financial instruments, or an admission to trading of financial instruments and any such offer, solicitation or admission can be made only by means of a prospectus or other offer documents pursuant to the applicable national law. This crypto-asset white paper does not constitute a prospectus as referred to in Regulation (EU) 2017/1129 of the European Parliament and of the Council or any other offer document pursuant to Union or national law.'
08	Characteristics of the Crypto-Asset	<u>Native Token of the Network</u> -The crypto-asset referred to in this white paper is the BABY token ("Token"). The Token is the native token of the Babylon Genesis blockchain network ("Network") – the first Bitcoin "Supercharged" Network ("BSN") that derives crypto-economic security directly from Bitcoin ("BTC") through the Babylon Bitcoin staking protocol ("Babylon Protocol"). <u>Functionalities</u> - By holding Tokens, Token holders can: ▪ Access the Network: The Token is required to access the transaction (such as staking transactions) capacities of the Network, store information or messages on-chain and to trigger smart contract executions on the Network. ▪ Interact with the Network: The Network relies on the proof of stake (PoS) consensus of the CometBFT stack. The Token is required to become a validator of the Network and contribute to the security of the Babylon Genesis via the staking mechanism.

		▪ Participate in the Network Governance: The purpose of the governance functionality of the Token is to create a stable and trustworthy ecosystem by allowing Token holders to access and participate in the decentralized, balanced ecosystem consensus mechanism. The Token provides a mechanism to adjust parameters of the Network and make changes (via software upgrades) to the underlying protocol. With votes equivalent to their respective Token staked, Token holders can participate in technical and/or operational decision-making via software code upgrades and signaling but have no influence over the corporate governance/policy of the person seeking admission to trading, the initiator of the Network, or any other party of the Babylon ecosystem. Delegated validator's vote will take precedence and be counted for in case of absence of a Token holder's express vote. <u>Negative Definition</u> - The Token does not represent nor confer any ownership, equity interest, participation, corporate governance rights, or any rights beyond the programmatic functionalities expressly described herein, nor any entitlement to business revenues, profit sharing, or other similar economic benefits in relation to the Network, any of the Babylon group of entities, or any other entity or individual. Protocol-level features, including without limitation automated supply adjustments or token burns, are technical parameters approved through a decentralized, on-chain governance process to promote the security, resilience, and efficiency of the Network. These mechanisms are designed to be implemented in a programmatic, non-discretionary manner and are not intended to create any expectation of profit for Token holders whatsoever, but solely to preserve the security and integrity, as well as to ensure longevity and sustainability of the Network. In that regard, an on-chain governance proposal has been independently approved to start allocating a portion of the network-level rewards attributable to Babylon Genesis' role as an infrastructure layer, supporting Bitcoin staking, toward programmatic Token burns via automated auctions. These mechanisms, which may be introduced, amended, or discontinued through decentralized governance, do not create or imply any legal rights, guarantees, or
--	--	---

		enforceable claims for Token holders, nor do they constitute dividends, profit participation, revenue sharing, or similar distributions in a corporate or contractual sense. The governance framework, including the processes for protocol upgrades or parameter adjustments, may evolve over time in accordance with its own governance rules. Participants are encouraged to review the current state of the Network and its parameters before interacting with the Network.
09	Key Information about the Quality and Quantity of the Goods or Services to which the Utility Token give Access Restrictions on Transferability.	Not applicable (see field 05).
10	Key Information about the Admission to Trading	Cuneiform Assets Limited (" Company ") - a British Virgin Islands based company - seeks admission of the Token on trading platforms operating within the European Union (" EU ") and/or the European Economic Area (" EEA ") (" Trading Platforms ").
PART I – INFORMATION ON THE RISKS		
I.01	Admission to Trading-Related Risks	No Listing Risk: The Company, its affiliates, directors, and officers shall not be held liable for any damages, losses, costs, fines, penalties, or expenses of any kind - whether or not reasonably foreseeable by the Company or the Token holder - that the Token holder may suffer, sustain, or incur in connection with, or as a result of, the Token not being listed on or by being delisted from a Trading Platform.

		▪ General Contractual and Counterparty Risk: The Company does not operate, control, oversee, or manage the functioning of crypto-asset services providers as defined under MiCA (“CASP”) operating within the EU/EEA and Trading Platforms (together with CASPs, the “Exchanges”), where the Token will be admitted for trading or listed. ▪ Multiple White Paper Risk: Token holders understand that any third party can decide to draft and publish a MiCA white paper about the Token (“Spontaneous White Paper”). The publication of these Spontaneous White Papers does not imply any endorsement by the Company that the Spontaneous White Papers are complete, correct, fair, clear and not misleading. ▪ Spontaneous Admission to Trading Risk by Trading Platform: Third parties can elect to admit the Token on their Trading Platforms without any request, authorization or approval by the Company or anyone else. Pursuant to article 5 (2) of MiCA, Trading Platforms are responsible for ensuring compliance with all applicable laws, especially MiCA requirements with respect to the spontaneous admission of the Token to trading. The Company, its affiliates, directors, and officers shall not be held liable for these spontaneous admissions to trading. ▪ Exchanges Risk: When Token holders buy or sell Token on the Exchanges, the Company does not serve as a contractual party or counterparty to the transaction. Consequently, any legal relationship concerning these Exchanges is subject to their own terms and conditions. The Company, and its service providers, assume no responsibility for the operations, services, or outcomes associated with any transactions or activity on the Exchanges. The Company provides no assurances regarding any Exchange itself and assumes no responsibility or liability for any regulatory, compliance, operational, financial, technical, or reputational failure that may adversely affects its activities. ▪ Pausing and Delisting Risk: The Company cannot guarantee that the Token will remain listed or tradeable on any of the Exchanges. Delisting (or the temporary pausing of such listing) on any of the Exchanges could significantly hinder the ability
--	--	---

		of Token holders to buy, sell, or otherwise transact in Token. In the event of delisting, Token holders may face challenges in finding alternative markets or counterparties willing to trade or transact in the Token, which could impact the liquidity and market value of Token. ▪ Trading Risk: The Company does not control the secondary markets. There can be no assurance as to the secondary market (if any) in Token. It cannot guarantee the depth, stability, or sustainability of any secondary market for Token. Limited market depth or trading activity may result in reduced liquidity, increased price volatility, and challenges in buying or selling the Token at desired prices. The Company also cannot guarantee the healthy and consistent availability of buying or selling opportunities for the Token or the integrity of the market price. Trading activity may be affected by manipulative practices such as wash trading, front-running, and similar schemes. While Exchanges and other trading platforms may be subject to varying regulatory frameworks that may or may not prohibit such practices and impose oversight to detect and deter them, the Company assumes no responsibility or liability for their effective prevention or enforcement. ▪ Operational and Technical Risk: The Exchanges operate interfaces that allow users to trade crypto-assets for fiat currencies such as U.S. Dollars and Euros, or other crypto-assets. The reliance on any Exchanges' internal system for asset storage and transfer adds an additional layer of counterparty risk, as users are exposed to potential operational, technical, or human errors during these processes, including the following: ▪ Trades on an Exchange may be executed based on a centralized matching algorithm and are often recorded off-chain, meaning they are not directly related to transparent on-chain transfers of crypto-assets, and could dissimulate detrimental trade matching or rogue practices. The traded assets are recorded solely on the Exchange's internal ledger, with each internal ledger entry corresponding to an offsetting trade involving either government currency or another crypto asset.
--	--	---

		▪ Funds deposited by users for trading may be co-mingled by the Exchanges, rather than stored in unique wallet addresses for each user. This practice results in the centralization of a large volume of assets in a single location, which in turn increases the potential risk of damage or theft, particularly in the event of a hack or security breach. ▪ Furthermore, users who wish to trade or withdraw their Token may be required to deposit them into the Exchange, increasing the risk of loss in the event of a failure of the deposit or withdrawal Token processes set up by an Exchange. ▪ Unanticipated Risks: In addition to the risks outlined in this Section, unforeseen risks may arise. Additionally, new risks could emerge as unexpected variations or combinations of the risks discussed in these Sections I.01 to I.05.
I.02	Issuer-Related Risks	The issuer is the Babylon Foundation (“Foundation”), please refer to section B for more information. ▪ Abandonment/Lack of Success Risk: The Network and the activities of the Foundation may be partially or totally abandoned for several reasons including, but not limited to, the lack of interest from the public, incapacitation or withdrawal of Token key developers and project supporters, force majeure (including pandemics and wars) or lack of commercial success or prospects. ▪ Change Risk: The Network may evolve over time. This could involve pivoting from the original vision of the Network or modifying how the vision and objectives of the project are executed. Such changes may be driven by market conditions, regulatory development, technological advancements, or strategic decisions by Network contributors. While adaptation and change can foster innovation, it also introduces risks, including shifts in value proposition and potential misalignment with prior expectations. ▪ Decentralization Risk: The Network is neither operated nor controlled by the Foundation or any of its affiliates. Should Token holders interact with the Network, they

		are engaging directly with the Network and potentially with third parties that might have no affiliation or relationship with the Foundation or the Babylon group of entities. This means that neither the Foundation, nor any other entity within the Babylon group of entities, does oversee or manage these interactions, and neither of them does assume responsibility for any outcomes that may arise. ▪ Partner Risk: The implementation of the Network depends strongly on the collaboration and functioning of services provided by several third parties, core contributors, activities of the legal entities associated with the project and other crucial ecosystem partners. Loss or changes in the project's leadership, key partners, and other service providers can lead to disruptions, loss of trust, reputational damage, or even complete project failure. The Foundation cannot guarantee that the Network will be successfully developed, deployed and remain operational in perpetuity. ▪ Legal and Regulatory Compliance Risk: Crypto-assets and blockchain technologies are subject to an evolving regulatory landscape worldwide. Regulations vary widely across jurisdiction and may be subject to significant changes, which would lead to changes with respect to the trading of the Token. Changes in laws or regulations may negatively impact the value, legality, or functionality of the Token. Non-compliance with changing or newly formed regulations can result in investigations, enforcement actions, penalties, fines, sanctions, or the prohibition of trading of Token, impacting the Network's viability and market acceptance. The Babylon group of companies, core contributors, or other ecosystem partners could be subject to private litigation. Additionally, any legal uncertainties, potential lawsuits, or adverse legal rulings can pose significant risks to the project. Legal challenges may ultimately affect the legality, usability, or value of the Token. ▪ Reputational Risk: There could be a risk of negative publicity related to the Network and its affiliated legal entities, whether due, without limitation to operational failures, security breaches, or association with illicit activities, all of which can damage the Network ecosystem reputation and, by extension, the value and usability of the Token.
--	--	--

		▪ Operational Risk: Any failure to develop or maintain effective internal control or any difficulties encountered in the implementation of such controls could harm the operations of the Foundation and the Babylon group of companies, causing disruptions, financial losses, or reputational damage. ▪ Competition Risk: There are other crypto-assets and projects in the decentralized storage space, and new competitors may enter the market at any time. The effect of existing, new or additional competition on the Token or its market price cannot be predicted or quantified. Competitors may have significantly greater financial, legal, and technical resources than the Foundation and the Babylon group of companies and there is no guarantee that the project will be able to compete successfully, or at all, with such competitors. ▪ Unanticipated Risks: In addition to the risks outlined in this Section, unforeseen risks may arise. Additionally, new risks could emerge as unexpected variations or combinations of the risks discussed in these Sections I.01 to I.05.
I.03	Crypto-Assets-Related Risks	▪ Market Risk: Crypto-assets, including the Token, are highly volatile, with prices subject to significant fluctuations in short periods due to market sentiment, regulatory news, technological advancements, and macroeconomic factors, which increases the risk of sudden and substantial losses. Such valuation risk arises as the market value of a crypto-asset may not always reflects its underlying utility or fundamental and is subject to subjective assessment. Token holders are thus exposed to potential losses due to the Token's: ▪ Potential fluctuations in value, driven by various factors such as supply and demand dynamics, token purchasers' and holders' sentiment, and broader market trends, including changes in interest rates, general movements in local and international markets, technological advancements, regulatory changes, and media coverage. Notably, momentum pricing of crypto-assets has previously resulted, and may continue to result, in speculation regarding future

		appreciation or depreciation in the value of such assets, further contributing to volatility and potentially inflating prices at any given time. ▪ Liquidity risk, where a lack of depth in secondary markets – if any – or limited trading volumes can hinder the ability to execute trades at favorable prices, which could lead to significant losses, especially in fast-moving market conditions. As a result, Token holders may experience challenges in managing their holdings, with the value of the asset subject to unpredictable fluctuations and potential depreciation. ▪ Solvency and collateral risk, if the Token is used to finance further activities, especially in leveraged positions or as collateral for loans. Significant fluctuations in the value of the Token could adversely affect the solvency of its holder, particularly if the Token is pledged as collateral. A drastic decline may trigger margin calls or automatic liquidations, which could further depress Token's price creating a negative feedback loop. This volatility poses the risk of forced asset sales, potentially resulting in substantial losses for the holder and amplifying downward pressure on the market price of the Token. ▪ Custodial Risk: The method chosen to store the Token, like any crypto-asset, carries inherent risks related to the security and management of the storage solution. The chosen storage method—whether hot or cold wallets, or centralized custody—can significantly impact the safety, liquidity, and accessibility of the Token, with direct consequences for the holder's ability to access, trade, or retain their assets. ▪ Scam Risk. Token holders may be subject to the risk of loss resulting from a scam or fraudulent schemes perpetrated by malicious actors targeting Token holders. These scams include, but are not limited to, phishing or social engineering on social networks or by email, fake giveaways, identity theft or impersonation of key contributors to the Network, creation of fake Tokens, offering fake Token airdrops, among others. Token holders, recipients and purchasers should always verify and confirm that they are interfacing with legitimate websites, personnel, and other assets associated with the Network.
--	--	---

		▪ Anti-Money Laundering/Counter-Terrorism Financing (AML/CTF) Risk: Crypto-asset wallets holding Token or transactions in Token may be used for money laundering or terrorist financing purposes or attributed to a person or entity known to have committed or is associated with such offenses. Consequently, there is a risk that a public wallet address holding Token could be flagged in relation to AML/CTF efforts. In such cases, receiving Tokens could result in a holder's address being flagged by relevant authorities, Exchanges, or other service providers, which may lead to restrictions on transaction or the freezing of a holder's assets. Token holders may thus face legal or regulatory challenges if their address becomes associated with illicit activities, impacting their ability to freely access, trade, or transfer their tokens. ▪ Taxation Risk: The taxation regime that applies to the trading of Tokens by either individual holders or legal entities will depend on each Token holder's jurisdiction. The Company cannot guarantee that the holding of the Token, the receipt of the Token, conversion of fiat currency against the Token, or other conversion of other crypto assets against the Token, will not incur tax consequences. It is the Token holder's sole responsibility to comply with all applicable tax laws, including, but not limited to, the reporting and payment of income tax, wealth tax, capital gains tax, or other similar taxes arising in connection with the appreciation and depreciation of the Token. ▪ Market Abuse Risk: The market for crypto-assets is rapidly evolving, spanning local, national, and international platforms with an expanding range of assets and participants. Any market abuse, along with a potential loss of confidence among holders, could adversely impact the value and stability of the Token. Notably: ▪ Significant trading activity may take place on systems and platforms with limited oversight and predictability. Sudden and rapid changes in the supply or demand of a crypto-asset, particularly those with low market capitalization or low unit prices, can result in extreme price volatility. ▪ Additionally, the inherent characteristics of crypto-assets and their underlying infrastructure may be exploited by certain market participants to engage in
--	--	--

		abusive trading practices such as front-running, spoofing, pump-and-dump schemes, and fraud across different platforms, systems, or jurisdictions. ▪ Legal and Regulatory Risk: There is a lack of regulatory harmonization globally, which results in diverging regulatory frameworks. Regulations related to crypto-assets remain in flux globally with possible further regulatory evolution in the future. Divergent and shifting regulation could negatively impact the value, utility and overall viability of the Token. Specifically: ▪ While Token is characterized as a token used to access and interact with the Network and its respective governance mechanism, certain non-EU regulators may nevertheless classify the Token as a security, financial instrument, or payment instrument under their respective legal frameworks. Such classifications could impose specific regulatory constraints, leading to significant changes in how the Token is structured, purchased, or traded. ▪ Evolving regulations could substantially increase compliance costs and operational burdens relating to facilitating transactions in the Token. ▪ New or restrictive regulations could result in Token losing functionality, depreciating in value, or even becoming illegal or impossible to use, buy or sell in certain jurisdictions. ▪ Regulators could take enforcement action against the Babylon group of companies if they determine that the Token constitutes a regulated instrument that has been issued in a non-compliant manner or that the activities of the project, its core contributors or other ecosystem partners violate existing laws. Such actions could expose such parties to legal and financial penalties, including civil and criminal liability. ▪ Slashing Risk: There is a risk of losing a portion of your staked Tokens in case of misbehavior on the side of the validator to whom Token holders have delegated their
--	--	---

		Tokens for staking activities. Token holders should always check the current slashing rate as this might be changed by a governance vote. ▪ Unanticipated Risks: In addition to the risks outlined in this Section, unforeseen risks may arise. Additionally, new risks could emerge as unexpected variations or combinations of the risks discussed in these Sections I.01 to I.05
I.04	Project Implementation-Related Risks	▪ Novel Ecosystem Risk: The Network and its ecosystem are built on emerging and rapidly evolving technologies, which inherently carry significant risks. The underlying software, blockchain infrastructure, smart contracts, and related technologies are still in their early stages of development, meaning there is no guarantee that the process of receiving, using or holding the Token will be uninterrupted or error-free. As with any novel technology stack, there is an inherent risk that the underlying blockchain, smart contracts, novel technical features, or associated components may contain weaknesses, vulnerabilities, or bugs, despite audits being conducted. Such issues could lead to unintended behaviors, security breaches, or critical failures, potentially resulting in the partial or complete loss of the Token or their functionality or the inability to access or use the services of the Network. Furthermore, unforeseen technical limitations, incompatibilities, or the emergence of superior alternative could further impact the stability, security, and long-term success and viability of the Babylon ecosystem. ▪ Dependency Risk: The Network relies on third-party technologies, infrastructures, and protocols, which could impact its functionality, security, and long-term sustainability. Any disruptions, vulnerabilities, regulatory scrutiny or changes in the Network may result in a negative effect on the Token. This reliance on external infrastructure increases systemic risk, as unforeseen issues in third-party infrastructure could cascade into disruptions in the Babylon ecosystem. ▪ Adoption Risk: The successful implementation of the Network depends on continued adoption of decentralized storage technology, distributed validator technology,

		ecosystem partnerships, user adoption, and ongoing development efforts to grow the ecosystem. There is a risk that adoption by storage node operators (including validators and finality providers), aggregators, publishers, and end users may be slower than expected, impacting the projected utility of the Token. ▪ Reliability Risk: There is a risk that the key features and services of the Network may not always function properly, negatively affecting the community's perception of the Network and its underlying technology and in turn, affecting the value of the Token. The Network will be deployed on an "as is" and "as available" basis without warranties of any kind. The Babylon group of companies cannot and do not warrant that the Token, the software code of the Token, or the Network are reliable current or error-free, free of viruses or other harmful components. ▪ Unanticipated Risks: In addition to the risks outlined in this Section, unforeseen risks may arise. Additionally, new risks could emerge as unexpected variations or combinations of the risks discussed in these Sections I.01 to I.05.
I.05	Technology-Related Risks	The person seeking admission to trading and its affiliate, directors and officers shall not be responsible or liable for any damages, losses, costs, fines, penalties or expenses of whatever nature, whether reasonably foreseeable by them and the Token holder, and which the Token holder, may suffer, sustain, or incur, arising out of or relating to the technical risks outlined below or a combination thereof. ▪ Cybersecurity Risk: The Token - including the Network infrastructure, smart contracts, wallets and other components - may be vulnerable to cyberattacks. Malicious actors may exploit software vulnerabilities, attack consensus mechanisms, or compromise private keys to gain unauthorized access to the Token. Risks include hacking attempts on the Network, smart contract exploits, phishing attacks, malware infections, and other forms of cybercrime that could result in the theft, loss, or unauthorized transfer of the Token. Since digital assets exist entirely in a technological

		environment, they are inherently exposed to evolving cyber threats, some of which may be undetectable or irreparable until after significant damage has occurred. ▪ Blockchain Risk: The Network could be susceptible to consensus-related attacks, including but not limited to double-spend attacks, majority validation power attacks, censorship attacks, and sybil attacks. Any successful attack presents a risk to execution of transaction associated with the Token. ▪ Smart Contract Risk: Transactions associated with the Token rely on smart contracts deployed on a blockchain network. Smart contracts are susceptible to coding vulnerabilities, bugs, or security flaws that could be exploited by malicious actors. A breach in the smart contract could result in unauthorized transactions, token loss, or manipulation of staking mechanism, negatively impacting the Token's security and trust among Token holders. Even though independent security audits are routinely conducted, unforeseen vulnerabilities may still pose a risk. ▪ Private Key Management Risk and Loss of Access to Crypto-Assets: The security of the Token holding heavily relies on the management of private keys, which are used to access and control crypto-assets. The Token holders are responsible for the custody of their Tokens in a compatible cryptographic wallet and for the security of their private keys. Poor management practices, loss, or theft of private keys, or respective credential, can lead to irreversible loss of access to the Tokens. If a Token holder connects their wallet to malicious applications or platforms, they also risk unauthorized access to their assets and their Token holdings. ▪ Settlement Finality and Irrevocability of Transactions: Transactions in Token may be irreversible. Holders sending Tokens to nonexistent or incorrect addresses may irrevocably lose their Tokens and be unable to reverse the transaction or recover their Tokens. ▪ Unanticipated Risks: In addition to the risks outlined in this Section, unforeseen risks may arise. Additionally, new risks could emerge as unexpected variations or combinations of the risks discussed in these Sections I.01 to I.0
--	--	---

I.06	Mitigation Measures	While security audits have been conducted (see H.09), potential Token holders understand that the risks outlined in Sections I.01 to I.05 above are inherent to the Network activities and the broader ecosystem, making elimination impossible. To further reduce exposure to these risks, prospective Token holders should adopt appropriate safeguards based on their chosen custody method and remain vigilant by actively monitoring publicly available news and market signals, enabling them to respond swiftly to significant developments which may result in the materialization of specific risks.
PART A – INFORMATION ABOUT THE PERSON SEEKING ADMISSION TO TRADING		
A.01	Name	Cuneiform Assets Limited
A.02	Legal Form	BVI BUSINESS COMPANY - company limited by shares
A.03	Registered Address	Trinity Chambers, PO Box 4301, Road Town, Tortola, British Virgin Islands
A.04	Head Office	Not applicable.
A.05	Registration Date	14 January 2025
A.06	Legal Entity Identifier	Not applicable.
A.07	Another Identifier Required Pursuant to Applicable National Law	BVI Company Number: 2167442
A.08	Contact Telephone Number	1-284-494-8445
A.09	E-Mail Address	legal@cuneiformassets.io

A.10	Response Time (Days)	Under normal circumstances, inquiries are answered within 7 business days.						
A.11	Parent Company	Babylon Foundation – an Exempted Limited Guarantee Foundation Company incorporated in the Cayman Islands with Limited Liability						
A.12	Members of the Management Body	<table border="1"> <thead> <tr> <th>Full Name</th><th>Business Address</th><th>Function</th></tr> </thead> <tbody> <tr> <td>Babylon Foundation</td><td>Leeward Management Limited, Suite 3119, 9 Forum Lane, Camana Bay, PO Box 144, George Town Grand Cayman KY1-9006, Cayman Islands</td><td>Corporate Director</td></tr> </tbody> </table>	Full Name	Business Address	Function	Babylon Foundation	Leeward Management Limited, Suite 3119, 9 Forum Lane, Camana Bay, PO Box 144, George Town Grand Cayman KY1-9006, Cayman Islands	Corporate Director
Full Name	Business Address	Function						
Babylon Foundation	Leeward Management Limited, Suite 3119, 9 Forum Lane, Camana Bay, PO Box 144, George Town Grand Cayman KY1-9006, Cayman Islands	Corporate Director						
A.13	Business Activity	The Company supports the Babylon group of companies, organize and conduct Token-related activities.						
A.14	Parent Company Business Activity	The objects for which the Babylon Foundation are: - to foster and support the research, development, extension and use of: (i) products, services, and / or protocols related to or connected with Bitcoin staking and other security protocols built on the Bitcoin blockchain including but not limited to the Babylon Bitcoin staking protocol, Babylon Bitcoin time stamping, the Babylon chain, data availability protocols and bridges (the "Protocols and Products"), (ii) the Ecosystem (as defined in the articles of association of the Foundation Company), and (iii) any other technology materially related to, necessary for or useful in connection with the Protocols and Products; and - to take any steps considered necessary in connection with supporting the research, development, extension and use of the Protocols and Products and the Ecosystem,						

		including, but not limited to, forming legal persons or entities in other jurisdictions which may better facilitate the development of the Protocols and Products and the Ecosystem; and (c) to do all such things as in the opinion of the directors are or may be incidental or conducive to the above object.
A.15	Newly Established	True.
A.16	Financial Condition for the Past Three Years	Not applicable.
A.17	Financial Condition Since Registration	The Company was only recently established under the BVI Business Companies Act, 2004. The Company operates as an ecosystem entity and is a wholly owned (100%) subsidiary of the Babylon Foundation (Parent Company see A.11). The Babylon Foundation provided the Company with the initial funding of USD \$5.1 million and will continue to finance the Company in the future to ensure that the Company can carry out its restricted business activity (see A.13). The treasury primarily holds cash and stablecoins (\$361K). The Company also controls 2.3 % of the initial total Token supply. As of the date of the present notification, the total operating expenses since registration have amounted to USD 2.0M, primarily covering expenses around airdrop, protocol, custody and other expenses related to its activities. The Company has no outstanding liabilities, debts, or financial commitments and does not face any financial risks or uncertainties impacting its long-term sustainability.

PART B - INFORMATION ABOUT THE ISSUER, IF DIFFERENT FROM THE OFFEROR OR PERSON SEEKING ADMISSION TO TRADING				
B.01	Issuer Different from the Person Seeking Admission to Trading	True		
B.02	Name	Babylon Foundation		
B.03	Legal Form	an Exempted Limited Guarantee Foundation Company incorporated in the Cayman Islands with Limited Liability

PART C- INFORMATION ABOUT THE OPERATOR OF THE TRADING PLATFORM IN CASES WHERE IT DRAWS UP THE CRYPTO-ASSET WHITE PAPER AND INFORMATION ABOUT OTHER PERSONS DRAWING THE CRYPTO-ASSET WHITE PAPER PURSUANT TO ARTICLE 6(1), SECOND SUBPARAGRAPH, OF REGULATION (EU) 2023/1114								
C.01	Name	Not applicable.						
C.02	Legal Form	Not applicable.						
C.03	Registered Address	Not applicable.						
C.04	Head Office	Not applicable.						
C.05	Registration Date	Not applicable.						

C.06	Legal Entity Identifier of the Operator of the Trading Platform	Not applicable.
C.07	Another Identifier Required Pursuant to Applicable National Law	Not applicable.
C.08	Parent Company	Not applicable.
C.09	Reason for Crypto-Asset White Paper Preparation	Not applicable.
C.10	Members of the Management Body	Not applicable.
C.11	Operator Business Activity	Not applicable.
C.12	Parent Company Business Activity	Not applicable.
C.13	Other Persons Drawing up the Crypto- Asset White Paper According to Article 6(1), Second Subparagraph, of Regulation (EU) 2023/1114	Not applicable.

C.14	Reason for Drawing the White Paper by Persons Referred to in Article 6(1), Second Subparagraph, of Regulation (EU) 2023/1114	Not applicable.
PART D – INFORMATION ABOUT THE CRYPTO-ASSET PROJECT		
D.01	Crypto-Asset Project Name	Babylon Genesis
D.02	Crypto-Assets Name	BABY Token
D.03	Abbreviation	BABY
D.04	Crypto-Asset Project Description	The Babylon Genesis is a layer one protocol enabling Bitcoin to provide security and liquidity to other chains and networks (BSNs). The Token is the native token of the Babylon Genesis. <u>Participants of the Network</u> ▪ Users (“Users”): BTC and Token holders can participate in the validation process by staking on Finality Providers and Validator (as defined below) respectively and helping secure the Network. ▪ Finality Providers (“Finality Providers”): Blockchain validators who have received BTC delegations from staking Users and contribute their computational power and resources to the Network.

		▪ Validators (“Validators”): Blockchain validators who have received delegations in Tokens from staking Users and contribute their computational power and resources to the Network. <u>The Network is connected to a Three-Layer Infrastructure, composed as follows</u> ▪ Babylon Protocol: The fundamental staking layer which enables BTC and Token holders to lock and use their BTC and Tokens to secure Proof-of-Stake (PoS) chains and rollups. ▪ Genesis Control Plane: The information layer that coordinates the information flow between the Gensis Babylon (and other BSNs) with the Bitcoin blockchain so that they can efficiently connect Bitcoin security and liquidity with minimal integration efforts. ▪ BTC Liquidity Hub: The infrastructure layer that facilitates Bitcoin liquidity flows through on-chain applications that are secured by Babylon Genesis. The Babylon Genesis represents the first layer one integrating the Babylon Protocol making it the first BSN. Other BSNs (layer one and layer two (rollup chains)) have committed to integrate the Babylon Protocol and are expected to accomplish it via Babylon Genesis. Babylon Genesis is meant to serve as the fundamental layer for the further expansion of the ecosystem (“Babylon Ecosystem”). The expansion towards the Babylon Ecosystem should be understood as a roadmap rollout process in the sense that there is no guarantee that these events will occur as planned, and they remain subject to change.
--	--	--

D.05	Details of all Natural or Legal Persons Involved in the Implementation of the Crypto-Asset Project			
		Full Name	Business Address	Function
		Babylon Labs Limited	Rodus Building, P.O. Box 3093, Road Town Tortola, VG 1110 Virgin Islands, British	Software Developpement Company
		Cuneiform Assets Limited	Trinity Chambers, PO Box 4301, Road Town, Tortola, British Virgin Islands	Ecosystem entity focusing on token-related activities
		Babylon Foundation	Leeward Management Limited, Suite 3119, 9 Forum Lane, Camana Bay, PO Box 144, George Town Grand Cayman KY1-9006, Cayman Islands	Ecosystem entity and Token issuer within the meaning of MiCA
D.06	Utility Token Classification	False.		
D.07	Key Features of Goods/Services for Utility Token Projects	Not applicable (see D.06).		
D.08	Plans for the Token	The Token has undergone, or is expected to undergo, the following key events: ▪ Public Launch of the Network: April 10, 2025 ▪ Token Airdrop (offer for free within the meaning of art. 4 (3) (a) MiCA): April 10, 2025 ▪ Enhance Liquidity and further Distribution of the Token.		

		With regard to future events, Token holders should find information from authoritative and genuine sources, including the Babylon forum where governance proposals are being discussed.
D.09	Resource Allocation	Babylon Foundation has received financing for its activities though the exact amounts cannot be disclosed due to confidentiality constraints. The financial resources have been primarily allocated to human and technical resources for the developpement of the Network.
D.10	Planned Use of Collected Funds or Crypto-Assets	Not applicable. The Company is seeking admission to trading and does not collect any funds in that context.
PART E – INFORMATION ABOUT THE OFFER TO THE PUBLIC OF CRYPTO-ASSETS OR THEIR ADMISSION TO TRADING		
E.01	Admission to Trading	Admission to Trading (ATTR).
E.02	Reasons for the Admission to Trading	The Token is the native token powering the Network. The admission of the Token to trading aims to make it accessible among potential Network participants, enabling them to fully engage with and benefit from the Network and its respective governance mechanism.
E.03	Fundraising Target	Not applicable. The present white paper is published solely in relation to the admission to trading of the Token under article 5 of MiCA and does not relate to any public offering.
E.04	Minimum Subscription Goals	Not applicable. See explanation under E.03.
E.05	Maximum Subscription Goal	Not applicable. See explanation under E.03.

E.06	Oversubscription Acceptance	Not applicable. See explanation under E.03.
E.07	Oversubscription Allocation	Not applicable. See explanation under E.03.
E.08	Issue Price	Not applicable. See explanation under E.03.
E.09	Official Currency or any other Crypto-Assets Determining the Issue Price	Not applicable. See explanation under E.03.
E.10	Subscription Fee	Not applicable. See explanation under E.03.
E.11	Offer Price Determination Method	Not applicable. See explanation under E.03.
E.12	Total Number of Traded Crypto-Asset	Up to 100% of total Token supply. At the public network launch on 10th April 2025, the estimated total supply was about 10,015,636,491 Tokens. The circulating supply is steadily increasing due to inflation. Currently, the inflation is set at 8% p.a. out of which 4% is BTC staking rewards, and 4% is Token staking rewards. These software parameters can be changed by an on-chain governance vote open to all validators with BABY Token stake. Information about the tokenomics can be found here (https://babylon.foundation/blogs/baby-tokenomics-guide), including the expected token unlocking schedule concerning distribution of the initial supply of BABY tokens amounting to approximately 10 billion Tokens. Those numbers are subject to change in case of changes to the tokenomics.

E.13	Targeted Holders	ALL, meaning both Retail (RETL) and Professional (PROF)
E.14	Holder Restrictions	Trading Platforms, in accordance with applicable laws and their internal policies, may impose restrictions on Token buyers and sellers. These may include, among others, the successful completion of Know Your Customer (KYC) procedures, Anti-Money Laundering (AML) checks, and measures to combat the financing of terrorism (CFT). The Tokens may not be offered, sold, transferred, delivered or otherwise made available, directly or indirectly, to any natural or legal person that (i) appears on a financial-sanctions list issued or enforced by the European Union, the United Kingdom, the United States of America (including OFAC's SDN List), the British Virgin Islands or the Cayman Islands, or (ii) is organized, resident or located in any jurisdiction that is itself the subject of comprehensive sanctions by any of the foregoing jurisdictions.
E.15	Reimbursement Notice	Not applicable. See explanation under E.03.
E.16	Refund Mechanism	Not applicable. See explanation under E.03.
E.17	Refund Timeline	Not applicable. See explanation under E.03.
E.18	Offer Phases	Not applicable. See explanation under E.03.
E.19	Early Purchase Discount	Not applicable. See explanation under E.03.
E.20	Time-Limited Offer	Not applicable. See explanation under E.03.
E.21	Subscription Period Beginning	Not applicable. See explanation under E.03.
E.22	Subscription Period End	Not applicable. See explanation under E.03.

E.23	Safeguarding Arrangements for Offered Funds/Crypto-Assets	Not applicable. See explanation under E.03.
E.24	Payment Methods for Crypto-Asset Purchase	The method of payment to buy and sell the Token on the Trading Platforms are determined and set by the Trading Platforms and are not controlled, influenced, or governed by the Company and/or the Babylon group of companies.
E.25	Value Transfer Methods for Reimbursement	Not applicable. See explanation under E.03.
E.26	Right of Withdrawal	Not applicable. See explanation under E.03.
E.27	Transfer of Purchased Crypto-Assets	The purchased Tokens can be transferred to or from the purchaser's compatible wallet or technical device as designated by the Trading Platforms. The Company and/or the Babylon group of companies bears no responsibility for any transfers of the Token between buyers and sellers conducted on the Trading Platforms.
E.28	Transfer Time Schedule	The transfer of the Token from the seller's wallet or device to the buyer's wallet or device may not occur immediately. The Company and/or the Babylon group of companies have no control over the timing of such transfers.
E.29	Purchaser's Technical Requirements	Token holder must comply with the technical requirements specific to the Trading Platforms on which the Token is admitted to trading, which may include the following: ▪ A compatible digital wallet or account on supported Trading Platform; and ▪ Internet access;

		▪ Wallets that are both compatible with the Network and support the Token. Such wallets can either be self-custodial or managed by a third party. If managed by third party, Token holders must comply with the Trading Platform's specific requirements.
E.30	Crypto-Asset Service Provider (CASP) Name	Not applicable. See explanation under E.03.
E.31	CASP Identifier	Not applicable. See explanation under E.03.
E.32	Placement Form	Not applicable.
E.33	Trading Platforms Name	Admission to trading is or might be sought on different Trading Platforms operating within the EU/EEA. Users should check their own Trading Platforms to see if the Tokens are supported.
E.34	Trading Platforms Market Identifier Code (MIC)	Not applicable.
E.35	Trading Platforms Access	Trading Platforms are accessible via their respective website or applications for mobile device.
E.36	Involved Costs	The use of services offered by Trading Platforms may involve costs, including transaction fees, withdrawal fees, and other charges, which should be notified to users in advance. These costs are determined and set by the respective Trading Platforms and are not controlled, influenced, or governed by the Babylon group of companies.
E.37	Offer Expenses	Not applicable. See explanation under E.03.
E.38	Conflicts of Interest	Not applicable.

E.39	Applicable Law	Seeking admission to trading of the Token shall be governed by the laws and regulations of the British Virgin Islands where the Company, as the person seeking admission to trading is incorporated, as well as the European Union law, including Regulation (EU) 2023/1114 on Markets in Crypto-Assets (MiCAR) together with any mandatory provisions of applicable national laws of the respective Member States (to the extent the latter do not contradict mandatory provisions of EU law). Once the Tokens are trading, the legal relationship and applicable law between the Trading Platforms and their users shall be determined on the basis of the law governing the contract between them and the applicable mandatory provisions of EU law. Nothing in this whitepaper shall deprive any consumer located in the EU or EEA of the mandatory rights conferred on that consumer by the consumer-protection legislation of his or her country of habitual residence.
E.40	Competent Court	The courts of the British Virgin Islands constitute a proper and convenient forum for disputes, claims or proceedings related to the person seeking admission to trading as it is incorporated in the British Virgin Islands. Any disputes arising in connection with the seeking of admission to trading of the Token that are between the Company and the respective Trading Platform for crypto-assets shall be determined by the respective competent court depending on the contractual arrangement (if any) between the parties and the mandatory provisions of applicable law. The competent court for any disputes between Trading Platforms and their users shall be determined on the basis of the contract between them and the applicable EU law. If you are an EU or EEA consumer, you may bring any judicial proceedings before the competent court of your place of residence.

PART F – INFORMATION ABOUT THE CRYPTO-ASSET		
F.01	Crypto-Asset Type	Crypto-asset other than e-money tokens and asset-referenced tokens.
F.02	Crypto-Asset Functionalities	The Token presents the following functionalities: ▪ Access the Network: The Token is required to access the transactions (such as staking transactions) capacities of the Network, store information or messages on-chain and to trigger smart contract executions on the Network. ▪ Interact with the Network: The Network relies on the proof of stake (PoS) consensus of the CometBFT stack. The Token is required to become a Validator of the Network and contribute to the security of the Babylon Genesis via the staking mechanism. ▪ Participate in the Network Governance: The purpose of the governance functionality of the Token is to create a stable and trustworthy ecosystem by allowing Token holders to access and participate in the decentralized, balanced ecosystem consensus mechanism. The Token provides a mechanism to adjust parameters of the Network and make changes (via software upgrades) to the underlying protocol. With votes equivalent to their respective Token staked, Token holders can participate in technical and/or operational decision-making via software code upgrades and signaling but have no influence over the corporate governance/policy of the person seeking admission to trading, the initiator of the Network, or any other party of the Babylon ecosystem. Delegated Validator's vote will take precedence and be counted for in case of absence of a Token holder's express vote.
F.03	Planned Application of Functionalities	There are parameters and future developments that could be driven by the associated governance process that could affect the Token functionalities and users are invited to familiarize themselves with the current state of the Network and the Token functionalities.

A description of the characteristics of the crypto-asset, including the data necessary for classification of the crypto-asset White Paper in the register referred to in Article 109 of Regulation (EU) 2023/1114, as specified in accordance with paragraph 8 of that Article		
F.04	Type of White Paper	OTHR
F.05	The Type of Submission	NEWT
F.06	Crypto-Asset Characteristics	The Token is to be classified as a crypto-asset other than e-money tokens and asset-referenced tokens which is required to: ▪ Participate in and interact with the Network; and ▪ Participate in the governance mechanism of the Network.
F.07	Commercial Name or Trading Name	BABY Token
F.08	Website of the Issuer	https://babylon.foundation/
F.09	Starting Date of the Admission to Trading	For admission at the Company's initiative: The Token may be traded once the white paper has been published by the Company (see F.10) and transmitted to the relevant Trading Platforms. For admission at the Trading Platform's initiative: Trading Platforms may also list the Token on their own initiative, without the authorization of the Company or any Babylon entity, in which case the starting date of the trading of the Token is at their sole discretion.
F.10	Publication Date	September 27, 2025.
F.11	Any other Services Provided by the Issuer	Not applicable.

F.12	Identifier of Operator of the Trading Platform	Not applicable.
F.13	Language or Languages of the White Paper	English
F.14	Digital Token Identifier Code used to uniquely Identify the Crypto-Asset or each of the Several Crypto Assets to which the White Paper relates, where Available	Not applicable.
F.15	Functionally Fungible Group Digital Token Identifier, where Available	Not applicable.
F.16	Voluntary Data Flag	False
F.17	Personal Data Flag	True
F.18	LEI Eligibility	Not applicable. The Company is not required to provide a LEI under MiCA.
F.19	Home Member State	Netherlands pursuant to Article 3 (33) (c) of Regulation
F.20	Host Member States	The admission to trading of the Token is passported in the following countries: Austria Belgium Bulgaria

		Croatia Cyprus Czechia Denmark Estonia Finland France Germany Greece Hungary Iceland Ireland Italy Latvia Liechtenstein Lithuania Luxembourg Malta Norway Poland Portugal Romania Sweden Slovakia Slovenia Spain
--	--	---

PART G – INFORMATION ON RIGHTS AND OBLIGATIONS ATTACHED TO THE CRYPTO-ASSETS		
G.01	Purchaser Rights and Obligations	The Token does not confer any rights or entitlements to its holders. Instead, the Token merely grants technical functionalities (access to the Network and its respective governance mechanism) when used in relation to the Network.
G.02	Exercise of Rights and Obligations	Not applicable. The Token does not confer ownership, voting rights (beyond the limited governance mechanisms which do not represent voting rights in the corporate sense), profit-sharing, or legal claims against any of the Babylon group of companies or the affiliated developers.
G.03	Conditions for Modifications of Rights and Obligations	Not applicable. Modifications to the Token programmatic usability may occur through the Babylon Protocol upgrades, governance decisions, and/or regulatory changes. Successfully passed governance proposals can adjust staking mechanisms, transaction fees, or network parameters. Token holders are responsible for staying informed about software upgrades.
G.04	Future Public Offers	At the time of the present notification, no such offers are currently planned.
G.05	Issuer Retained Crypto-Assets	Information about the tokenomics can be found here (https://babylon.foundation/blogs/baby-tokenomics-guide), including the tokens that the issuer has retained, as well as expected token unlocking schedule concerning distribution of the initial supply of BABY tokens amounting to approximately 10 billion Tokens. Those numbers are subject to change. The current unlock schedule looks like this:

		BABY Token Unlocking Schedule  The chart, titled "BABY Token Unlocking Schedule", illustrates the distribution of tokens over a 4-year period. The y-axis represents the number of tokens in billions (0 to 10B), and the x-axis represents time in years (0 to 4). The distribution is as follows: <table><thead><tr><th>Category</th><th>Percentage</th></tr></thead><tbody><tr><td>Advisors</td><td>3.5%</td></tr><tr><td>Team</td><td>15%</td></tr><tr><td>Early Private-Round Investors</td><td>30.5%</td></tr><tr><td>Ecosystem Building</td><td>18%</td></tr><tr><td>R & D + Operations</td><td>18%</td></tr><tr><td>Community Incentives</td><td>15%</td></tr></tbody></table>	Category	Percentage	Advisors	3.5%	Team	15%	Early Private-Round Investors	30.5%	Ecosystem Building	18%	R & D + Operations	18%	Community Incentives	15%
Category	Percentage															
Advisors	3.5%															
Team	15%															
Early Private-Round Investors	30.5%															
Ecosystem Building	18%															
R & D + Operations	18%															
Community Incentives	15%															
G.06	Utility Token Classification	True														
G.07	Key Features of Goods/Services of Utility Tokens	Not applicable. See G.06.														
G.08	Utility Tokens Redemption	Not applicable.														
G.09	Non-Trading Request	True														
G.10	Crypto-Assets Purchase or Sale Modalities	Not applicable.														

G.11	Crypto-Assets Transfer Restrictions	There are no restrictions on transfers other than those that may be required by Trading Platforms to comply with applicable law.
G.12	Supply Adjustment Protocols	True.
G.13	Supply Adjustment Mechanisms	An on-chain governance proposal has been independently approved to start allocating a portion of the network-level rewards attributable to Babylon Genesis' role as an infrastructure layer, supporting Bitcoin staking, toward programmatic Token burns via automated auctions. These mechanisms, which may be introduced, amended, or discontinued through decentralized governance, do not create or imply any legal rights, guarantees, or enforceable claims for Token holders, nor do they constitute dividends, profit participation, revenue sharing, or similar distributions in a corporate or contractual sense. The governance framework, including the processes for protocol upgrades or parameter adjustments, may evolve over time in accordance with its own governance rules. Participants are encouraged to review the current state of the Network and its parameters before interacting with the Network.
G.14	Token Value Protection Schemes	False.
G.15	Token Value Protection Schemes Description	Not applicable.
G.16	Compensation Schemes	False.
G.18	Applicable Law	The Tokens do not give rise to obligations or direct rights enforceable against their issuer or any Babylon group entities.

		The creation of the Tokens is governed by the applicable laws in the Cayman Islands where the issuer entity is incorporated. Nothing in this whitepaper shall deprive any consumer located in the European Union or European Economic Area of the mandatory rights conferred on that consumer by the consumer-protection legislation of his or her country of habitual residence.
G.19	Competent Court	The courts of the Cayman Islands constitute a proper and convenient forum for disputes, claims or proceedings related to the creation of the tokens as the issuer is incorporated in the Cayman Islands. If you are an EU or EEA consumer, you may be able to bring any judicial proceedings before the competent court of your place of residence.

PART H – INFORMATION ON THE UNDERLYING TECHNOLOGY		
H.01	Distributed ledger technology	Pursuant to article 3 (1) and (2) of MiCA, a Distributed Ledger technology means a technology that enables the operation and use of distributed ledgers, i.e., an information repository that keeps records of transactions and that is shared across, and synchronized between, a set of DLT network nodes using a consensus mechanism. The Network does utilize distributed ledger technology. It is a purpose-built Layer 1 blockchain protocol specifically optimized for Bitcoin staking, Bitcoin liquidity protocols and decentralized trust anchoring.
H.02	Protocols and technical standards	<u>Protocols Supporting Issuance and Transfer</u> The Token is natively issued and transferred using the Babylon Genesis protocol, a layer one blockchain built on the Cosmos SDK and utilizing CometBFT (a Byzantine Fault Tolerant consensus engine derived from Tendermint Core). All token balances, transfers, and staking operations are recorded on the Network's ledger using protocol-native message types (MsgSend, MsgStake, etc.), rather than through externally deployed smart contracts. This native implementation ensures deterministic execution, enhanced scalability with full compatibility across the Cosmos ecosystem. The Bitcoin Finality Protocols Babylon introduces a novel set of protocols, including but not limited to Bitcoin Timestamping, to increase the security guarantees of the network. Finalized checkpoints from Babylon's CometBFT consensus are periodically anchored into the Bitcoin blockchain using cryptographic commitments. This mechanism enhances Babylon's resistance to long-range attacks and serves as an immutable timestamping layer with globally recognized settlement assurance.

		Messaging and Encoding Standards The Network uses: ▪ Protobuf (Protocol Buffers) for encoding state transitions and messages between modules ▪ ABCI (Application Blockchain Interface) for communication between the consensus and application layers, ▪ gRPC/REST APIs for external query and transaction submission, ▪ Cosmos SDK module architecture, enabling compatibility with standard tooling (e.g. CosmJS, Keplr Wallet). Transaction data is broadcast over a CometBFT P2P network using a secure gossip protocol and validated by a quorum of staking validators. Custody and Wallet Compatibility The BABY token uses Secp256k1 elliptic curve cryptography for key management, compatible with existing Cosmos-based wallets, including: ▪ Keplr ▪ Cosmostation ▪ Ledger (via Cosmos Ledger app) Token custody solutions that support the Cosmos SDK and CometBFT-based networks are fully interoperable with Babylon.
--	--	--

H.03	Technology Used	<u>Overview</u> The Token operates on the Network, a purpose-built Layer 1 blockchain leveraging modular, secure, and scalable open-source infrastructure. Babylon Genesis integrates the Cosmos SDK, CometBFT, and a proprietary Bitcoin Finality Protocols (namely Bitcoin Staking Protocol and Bitcoin Timestamping) to achieve high throughput, deterministic finality, and Bitcoin-anchored settlement guarantees. This hybrid design enables Babylon Genesis to offer validator-based consensus, and trust-minimized security inherited from Bitcoin, the most secure blockchain globally by cumulative proof-of-work. <u>Core Technology Stack</u> <table><tr><th>Component</th><th>Description</th></tr><tr><td>Cosmos SDK</td><td>Modular blockchain framework enabling native token logic, governance modules, and staking economics. Component	Description							
Cosmos SDK	Modular blockchain framework enabling native token logic, governance modules, and staking economics. Babylon Genesis uses customized Cosmos modules for monitoring the Bitcoin ledger and verifying transactions, Bitcoin timestamping, and finality tracking.							
CometBFT (formerly Tendermint Core)	Byzantine Fault Tolerant (BFT) consensus engine that ensures deterministic finality. It separates networking, consensus, and application layers							

		Bitcoin Staking Protocols	Babylon's proprietary protocols for using Bitcoin voting power to finalize PoS chain blocks. It uses BTC transactions to timestamp and secure Babylon's state checkpoints.
		CosmWasm	WebAssembly-based smart contract engine for deploying permissioned and public dApps on Babylon Genesis.
		Cryptography	Based on the Secp256k1 elliptic curve, consistent with Cosmos-wide standards and compatible with Keplr, Cosmostation, and Ledger devices.
		Communication Protocols	Supports gRPC, REST, and WebSocket for client interactions; ABCI (Application Blockchain Interface) connects consensus to application logic.
		Storage Layer	Application state is stored using Merkleized key-value stores backed by the Cosmos SDK's IAVL (Immutable AVL tree) database.
		Vigilante Programs	A set of programs that monitors events on Bitcoin chain and Babylon chain and report the events to the counterparty chain.
		<u>Protocol Upgrades</u> Babylon Genesis supports on-chain governance for protocol upgrades. Changes to validator parameters, fee models, or module logic must pass proposal thresholds defined in the governance module. Binary upgrades are executed via scheduled height triggers and require	

		node operator coordination. The number of staked Tokens determines the amount of voting power.
H.04	Consensus Mechanism	<u>Consensus Mechanism</u> The Network runs a Cosmos SDK-based Proof-of-Stake blockchain using CometBFT (Tendermint) consensus. In CometBFT, validators propose and commit blocks via a Byzantine-fault-tolerant (“BFT”) round of pre-votes and pre-commits. Once $\geq 2/3$ of voting power signs a block, it is committed and final (deterministic finality), meaning no forks beyond that point. CometBFT is BFT by design: it tolerates up to one-third of validators failing or behaving maliciously. In Babylon’s live network, CometBFT validators (secured with staked Tokens) produce blocks and commit them. On top of this PoS block production, the Network adds a Bitcoin-secured finality layer. After each block is committed by CometBFT, a separate “finality round” is held among the Finality Providers (FPs). FPs (secured by staked bitcoin), cast extra votes using a specialized Extractable One-Time Signature (“EOTS”) scheme. Only blocks that pass both CometBFT commit and FP finality rounds become fully finalized. Thus Babylon’s consensus achieves deterministic finality twice over: first via CometBFT’s 2/3 commit, then via the Bitcoin-staked finality round. Dual Staking Model Babylon employs a dual-staking model combining BABY-token staking and native bitcoin staking: ▪ BABY staking: BABY token holders delegate to Cosmos/Tendermint validators. BABY-stakers accrue inflationary BABY rewards and voting power (governance rights) proportional to their stake. Validators (BABY-staked) handle block production and

		network consensus. BABY staking also provides a fast-unbonding mechanism (see below) via Bitcoin anchoring. ▪ BTC staking: BTC holders stake native bitcoin by locking it in self-custodial vault and delegating to Finality Providers using EOTS. This BTC is never wrapped or bridged. Each BTC staker selects an FP and locks their BTC in a covenant script on Bitcoin. Staked BTC grants economic security but no BABY voting power. Bitcoin stakers earn token rewards. FPs charge a commission on these rewards, paid out to the delegators. This dual model adds an additional layer of Bitcoin security to the Network: Token staking drives the PoS consensus (efficient block production), while BTC staking by FPs reinforces finality and defends against long-range attacks. Importantly, BTC-stakers cannot participate in BABY governance; only BABY holders vote on protocol changes. Validators and Finality Providers Validators (BABY-staked): Any node can become a validator by self-delegating BABY tokens and meeting the on-chain criteria. Validators verify transactions, propose and vote on blocks via CometBFT, and maintain the chain state. BABY delegators receive staking rewards proportional to their stake, and validators collect a share of those rewards (via commission, except for self-delegation). Validators govern the chain together with delegators: on-chain votes are cast using each validator's bonded BABY stake. Finality Providers (FPs, BTC-staked): FPs play a unique role on Babylon Genesis. They run specialized nodes that participate in the finality rounds after each CometBFT block. In each finality round, each FP submits a signature (using its EOTS key) to vote on the just-committed block. By aggregating $\geq 2/3$ of total FP stake, the chain gains an extra proof of finality anchored by bitcoin security. Thus, FPs act "like impartial referees" for consensus.
--	--	--

		FPs publish a “covenant” with their EOTS public keys on-chain; these keys allow the protocol to prove misbehavior if an FP double-votes. In short, validators ensure correct block creation; finality providers confirm and strengthen finality with BTC-backed attestations. Bitcoin Anchoring (Checkpointing) Babylon Genesis regularly anchors its state to Bitcoin to increase security and enable fast features. At each epoch boundary (~every ~1 hour), the protocol takes a cryptographic digest (checkpoint) of the Babylon chain’s state and commits it on Bitcoin. Specifically, a checkpoint transaction publishes the hash of that block (or Merkle root) to the Bitcoin network. Once that Bitcoin transaction is confirmed, the epoch’s state is irreversibly anchored to Bitcoin. This anchoring serves multiple purposes: it mitigates long-range attacks (an attacker cannot rewrite Babylon’s history without redoing Bitcoin proofs) and it underpins Babylon’s fast unbonding. In Babylon, when a BABY delegator unbonds, the exit isn’t subject to Cosmos’s usual 21-day wait. Instead, at unbonding epoch the chain publishes the current state to Bitcoin, and the delegator only waits for that Bitcoin anchoring to finality (≈300 blocks). After those confirmations, the tokens are released. In effect Babylon turns Bitcoin’s security into a verifiable checkpoint: once the checkpoint appears on Bitcoin, all previous blocks are settled. In summary, Babylon’s Bitcoin anchoring module ties the PoS chain to Bitcoin. Every epoch checkpoint and multi-chain message is time-stamped on Bitcoin, creating an immutable bridge of trust. This is integral to Babylon’s design: “Bitcoin Security” (anchoring and staking) is woven into everything from fast unbonding to the overall consensus finality. Governance and Upgrades Babylon implements on-chain governance via the Cosmos-SDK governance module. BABY token holders (and their delegated stake) can submit and vote on proposals that control the upgrades to the chain. Governance covers all key operations: <i>software upgrades</i>, parameter changes, new Cosmos zones, or enabling smart contracts.

H.05	Incentive Mechanisms and Applicable Fees	<u>Incentive Mechanisms and Applicable Fees</u> Rewards and Slashing Staking rewards incentivize honest participation, while penalties (slashing) deter malicious behavior. The Network has an inflationary mechanism where the total circulating supply of tokens increases over time with the automatic and programmatic minting of new tokens by the Network. Inflation rates can be changed by a governance vote. Currently it is 8% per annum. 4% is staking rewards for BABY stakers. 4% is staking rewards for Bitcoin stakers. Validators (BABY staking): BABY delegators earn inflationary token rewards and validators also charge a commission (assuming the staker does not self-delegate which is possible). The exact reward formula follows Cosmos SDK norms, typically based on each validator's commission rate and total stake. Validator and delegator rewards vest after the (fast) unbonding period. The Network also programmatically charges gas fees which are distributed to validators pro rata to the stake delegated to them. BABY staking includes slashing: a validator can be slashed (loss of staked BABY) if it double-signs (i.e. signs two different blocks at the same height). The slashing penalty currently is 5% of delegated tokens, with the remaining 95% returned to delegators. No other faults (e.g. offline downtime) are currently slashed. All slashing events are recorded on-chain for transparency. Finality Providers (BTC staking): Finality Providers (via commission) and their BTC delegators earn staking rewards. Each FP sets a commission rate: delegators' rewards are reduced by this fee, which accrues to the FP as compensation for running the node and providing the services to the staker.
------	--	---

		Slashing in the BTC staking protocol works in the following manner: if an FP double-signs, its BTC stake and any staked BTC delegated to it can be partially slashed. Technically, the Protocol uses the EOTS mechanism and a covenant contract. This process is trustless - in EOTS, signing two different messages with the same key creates an intentional mathematical vulnerability that allows others to reconstruct the private key. This works because the mathematical structure of the two signatures leaks enough information to solve for the private key — a feature intentionally designed into EOTS. The process is secure and does not leave room for abuse in case of honest behaviour on behalf of the finality provider. The leaked private key can be used to execute the pre-signed slashing transaction by anyone. The slashing transaction sends the offender's slashed bitcoin amount to a burn address. Delegated bitcoin stake can also be slashed if the FP misbehaves (in cases where those are different persons). In practice, the network caps slashing to a small percentage (e.g. up to 0.1%) Delegators consent to these slashing conditions upon staking. The rewards and slashing parameters can be changed via software upgrade through a governance vote. Users of the Network shall ensure they understand the current state of the Network and its parameters.
H.06	Use of Distributed Ledger Technology	'False' – No, DLT not operated by the issuer or a third-party acting on the issuer's behalf.
H.07	DLT Functionality Description	Not applicable.
H.08	Audit	True.
H.09	Audit outcome	The Babylon project undergoes independent third-party security audits conducted by reputable blockchain security firms, assessing the chain and the protocol risks. Up to this date, all identified vulnerabilities have been either remediated or acknowledged with justifications, and the final reports confirm that no critical or high-risk issues remain unresolved. The outcome of

		the audits demonstrates a strong security posture aligned with best practices. A current list of security audits concerning the Network can be found here: https://docs.babylonlabs.io/guides/security/audit_reports/

PART J – INFORMATION ON THE SUSTAINABILITY INDICATORS IN RELATION TO ADVERSE IMPACT ON THE CLIMATE AND OTHER ENVIRONMENT-RELATED ADVERSE IMPACTS		
J.01	Adverse impacts on climate and other environment-related adverse impacts	The below is information on the principal adverse impacts on the climate and other environment-related adverse impacts of the consensus mechanism used to validate and finalize transactions in the Tokens and to maintain the integrity of the distributed ledger of transactions. The energy consumption for the validation and finality of transactions and the maintenance of the integrity of the distributed ledger of transactions for the period is estimated to be lower than 500'000 kWh. (see S.08).
S.02	Name	Cuneiform Assets Limited
S.03	Relevant legal entity identifier	BVI BUSINESS COMPANY - company limited by shares
S.04	Name of the crypto-asset	BABY
S.05	Consensus Mechanism	See H.04
S.06	Incentive Mechanisms and Applicable Fees	See H.05
S.07	Beginning of the period to which the disclosure relates	April 10, 2025
S.08	End of the period to which the disclosure relates	August 18, 2025

S.09	Energy consumption	< 500'000 kWh. The total estimated energy consumption for the operation and validation of the Network from April 10, 2025, to August 18, 2025, is approximately 108,660 kWh yearly.
S.10	Energy consumption sources and methodologies	The figure provided in S.08 is intended to reference annualized amounts and is a best guess estimate. The numbers are subject to change due to factors outside of the Babylon group of entities' control – e.g. hardware modifications, different choice of hardware, quality of the electricity supplied, validators or finality providers going offline, parameter changes increasing or decreasing the number of validators or finality providers, etc. The consumption estimation is based on the following assumptions: Finality providers using “c5.large” machines consuming approx. 191 kWh yearly. The Network currently has 60 active finality providers. So yearly consumption for provision of finality is approximately 11,460 kWh yearly. Validators using “c5.4xlarge” machines consuming approx. 972 kWh yearly. The Network currently has 100 active validators. So yearly consumption for provision of validation services is approximately 97,200 kWh yearly. This makes for a combined energy consumption of approximately 108,660 kWh yearly. The total energy consumption is calculated as the sum of the energy expenditure of all currently active validators and all finality providers that are actually helping secure the Network. The number was found using a block explorer. For this purpose, typical node devices used for Validators and Finality Providers were taken into account. Their number was multiplied by the approximate individual power demand of each device to obtain this figure.
